

The Oxford Partial Knee

A partial knee replacement only replaces the part of the knee that is affected by arthritis leaving more normal tissue behind. This allows for a smaller operation to be performed with less tissue trauma and a smaller incision.

Below are 8 facts you should know about the Oxford Knee.

- Developed in Oxford 40 years ago (Great medical discoveries from Oxford, on-line exhibition at the Bodleian Library).
- Most researched knee replacement on the market.
- Most used partial knee replacement in the world.
- 50% of knee replacement candidates suitable.
- Better functional results compared with standard knee replacement surgery.
- Lower risks compared with standard knee replacement surgery.
- Quicker recovery compared with conventional knee replacement surgery.
- Best surgical outcomes published from our group of surgeons in Oxford.

If you need a knee replacement you can't get better than an Oxford in Oxford.
